Experience

The Key Support Services

Software Engineer - Bristol

06/2022 - Present

I work as a Software Engineer on [GovernorHub](#), the leading online service for school governors and trustees.

I have become the most senior developer on the team. In addition to building software, I've had the opportunity to onboard and train new engineers. I work with product managers and other stakeholders to write technical specifications and gather requirements.

My colleagues and I were responsible for a complete ground up rewrite of GovernorHub's front-end. At the time I joined, GovernorHub was a legacy AngularJS codebase with React injected into it for specific components. We completely rearchitected it using the Next.js App router which produced a much better user experience. I was responsible for reimplementing many significant features in React.

I built processes to triage bugs from customer feedback in Intercom and convert them into issues in Linear. I've worked on integrations with products maintained by other teams internally and externally such as Salesforce and [Get Information About Schools \(GIAS\)](#).

I've also had the opportunity to onboard new developers into an expanding team and write developer specifications for new features.

Udrafter

Student Software Developer (.Net Core/React) - Edinburgh

09/2020 - 09/2021

Initially, I worked as a React developer in tandem with a .NET developer on Udrafter's platform.

I later transitioned into the role of a Fullstack engineer independently rewriting the messaging features in their platform.

This involved creating a Vue.js front-end and a .NET Core messaging microservice. I then led the team that integrated this service into the main platform.

Skills

React, Next.js, JavaScript, TypeScript, Node.js, gRPC, GraphQL, MongoDB, Docker, React Native

Education

Computing Science

University of Dundee Dundee

06/2022

I attended the University of Dundee from 2018 to 2022 and graduated with a First Class Honours degree in [Computing Science](#).

Unlike other computing degrees which place a great deal of emphasis on the theoretical mathematics underpinning computing, my course was centered around learning practical skills for the workplace.

Most of our course was spent doing projects which were completed in teams, and we were encouraged to collaborate and

learn a variety of different programming languages and skills.

I was also active in the Dundee University Computing Society (DUCS) and served as Treasurer for 2021-22. I helped hold the first in-person society events, shortly after the UK had just emerged from the final Coronavirus lockdown. During my time on the committee, we held many successful events such as a Hackathon (sponsored by BlackRock and Unity) and a Ceilidh.
